MBBS, MD,
MCPPhleb

DR. SUNIL JOSHI

MBBS, FAIS, FVES
(Nizam's-Hyderabad),
FVES (RCSEd U.K),
MS(General Surgery)

OUR TREATMENTS

EVLA (Endovenous Laser Ablation)

Endovenous laser ablation is a minimally invasive procedure that can be performed under local anesthesia and is used to treat varicose veins. It involves using laser energy to seal off the affected vein, redirecting blood flow to healthier veins, and typically results in less pain and quicker recovery compared to traditional surgery

VenaSeal™ Closure system

Venaseal Treatment

Venaseal treatment revolutionizes varicose vein therapy with a minimally invasive approach. It involves using medical adhesive to seal the affected vein, eliminating the need for anesthesia or compression stockings post-procedure, offering a swift recovery and effective long-term results.
